CAREER SUMMARY

MSc AI/ML graduate with hands-on experience building production-grade AI systems including intelligent voice agents, RAG pipelines, LLM-powered applications, and multi-channel communication platforms. Strong foundation in machine learning, NLP, deep learning, and generative AI with a proven ability to take projects from prototype to deployment. Seeking opportunities to contribute to impactful AI/ML products and solve real-world problems at scale.

TECHNICAL SKILLS

Languages & Tools: Python, SQL, Git, Docker, MLflow, Fast API, Jupyter Notebook, VS Code

ML & Deep Learning: PyTorch, Scikit-learn, Model Training, Transfer Learning, Feature Engineering, Hyperparameter Tuning, Model Evaluation

NLP & Generative AI: LangChain, Transformers, Hugging Face, RAG, Prompt Engineering, LLM Applications, Text Embeddings, Vector Search, Fine-Tuning

Data & Databases: Pandas, NumPy, Matplotlib, Seaborn, PostgreSQL, MongoDB, Vector Databases (FAISS, Qdrant), Power BI

PROFESSIONAL EXPERIENCE

Artificial Intelligence Intern

Feb 2026 – Present

KreoHealth | Noida

- Built Voxa, an AI-powered omnichannel communication platform with intelligent voice agents for inbound/outbound calls using speech-to-text, LLMs (OpenAI/Claude), text-to-speech, and voice cloning for custom brand voices.
- Engineered a RAG-powered knowledge base with vector databases, enabling the voice agent to deliver accurate, company-specific answers from uploaded documents during live conversations in real time.
- Designed multi-channel campaign engines (call, SMS, email, WhatsApp) with scheduling, audience segmentation, retry logic, and real-time analytics dashboards; integrated all channels with the voice agent for seamless cross-channel follow-ups.
- Developed a WhatsApp conversational agent deployed across healthcare, real estate, e-commerce, and education for appointment booking, lead qualification, and customer query resolution.
- Integrated multiple CRMs (HubSpot, Salesforce, Zoho) with bidirectional real-time sync and built multi-tenant customization allowing businesses to configure agent behavior, tone, scripts, and conversation flows.

AI Model Evaluation Researcher

Oct 2025 – Present

Outlier AI | Remote

- Evaluated LLM outputs using structured rubrics across factual accuracy, hallucination detection, faithfulness, instruction-following, and safety compliance, providing actionable feedback to improve model alignment.
- Identified recurring failure patterns and edge-case weaknesses across large volumes of assessment tasks, contributing to measurable improvements in model response reliability.

PROJECTS

NLP-Based Email Categorization System [\[Link\]](#)

- Built an end-to-end NLP pipeline to fetch, clean, and preprocess 60K+ Gmail emails, generating transformer-based semantic embeddings with PCA-based dimensionality reduction for efficient representation of large-scale email text data.
- Applied hierarchical clustering (Bisecting K-Means) with LLM-based labeling and summarization to automatically assign meaningful multi-level category labels to email clusters, enabling structured organization of unstructured mailbox data.
- Trained supervised classification models (MLP) on embedding-cluster pairs to classify new incoming emails in real time, creating a continuously updatable system that eliminates manual email sorting and improves productivity.

EDUCATION

M.Sc. Artificial Intelligence and Machine Learning

2024 – 2026

Jamia Millia Islamia, New Delhi | CGPA: 9.38

B.Sc. (Hons) Applied Mathematics

2019 – 2022

Jamia Millia Islamia, New Delhi | CGPA: 9.53 | Ranked 2nd in Class

CERTIFICATIONS & ACHIEVEMENTS

- IBM AI Agent Architect Certificate
- HackerRank SQL – 5-Star Badge
- Amazon ML Challenge 2025 – Built a multi-modal price prediction pipeline using PyTorch, Open CLIP, and Sentence Transformers, achieving SMAPE of 54.6
